

# KPU Formula®

## With zinc and vitamin B6

### Vitamin B6 and zinc influence numerous functions of the human body

Vitamin B6 and zinc support many different processes in the body. Vitamin B6 contributes to the formation of the red blood cells (haem synthesis) and zinc is involved in DNA synthesis and the formation of new cells. In order to maintain these functions, the body needs a sufficiently high supply of these important micronutrients. KPU Formula® supports the vitamin B6 and zinc intake in a targeted manner and also makes an important contribution to the supply of other essential vitamins and minerals.

### Biogena KPU Formula®: With zinc and vitamin B6

- With high concentrations of zinc and vitamin B6
- Vitamin B6 contributes to the normal formation of red blood cells (haem synthesis)
- Zinc plays a role in DNA synthesis and is also involved in cell division

### Possible uses:

- For the targeted intake of important vitamin B6 and zinc
- To support normal formation of red blood cells (haem synthesis)
- To support the somatic cells during DNA synthesis and cell division
- For an additional supply of important vitamins and minerals

### Bioavailable micronutrients in pure form

- according to the pure substance principle
- Without colorants and flavorings
- gluten-free
- lactose-free
- Fructose-free
- Hypoallergenic
- Vegetable capsule shell
- Tested quality
