

# Nutrident OsPro®

## Micronutrients for jawbones and teeth

### Selected micronutrients for the good of your teeth

Shiny teeth and healthy gums are more than just a nice embellishment to the face of a person. They represent health and good looks and leave behind a lasting impression. Diet is an important factor in maintaining a radiant smile. Here, selected micronutrients can contribute by supporting the maintenance of the bones and connective tissue structures. The periodontium is composed of bone-like tissue and ensures that all the teeth are firmly anchored in the jawbone. This is also where the selected micronutrient combination in Nutrident OsPro® takes effect, which has been developed to support bones, cartilage and connective tissue structures and to contribute to maintaining bone density in the jaw.

### Nutrident OsPro®:

- With vitamins and minerals for supporting bones and connective tissue, e.g. those of the periodontium.
- Contains glucosamine and chondroitin.
- Calcium is needed to maintain the teeth.
- Manganese and copper support the connective tissue.
- Calcium and the vitamins D & K contribute to maintaining the bones.
- Vitamin C supports the formation of collagen and thus, contributes to maintaining the normal function of teeth.

### Possible uses:

- For the targeted intake of glucosamine, chondroitin and bone-relevant micronutrients
- As nutritional support for teeth, bones, cartilage and connective tissue structures

### Bioavailable micronutrients in a pure form

- According to the pure substance principle
- Without colours, flavours or glazing agents
- Gluten-free
- Lactose-free
- Hypoallergenic
- Vegetable capsule shell
- Quality tested
