

Vitamin D 2000 DUO Gold

High quality vitamin D3 in combination with linseed oil

Vitamin D, the so-called sun vitamin, can only be absorbed in very small amounts from food and is mainly produced by the sun's rays in the skin. However, solar radiation is very weak, especially in the autumn and winter months, and therefore vitamin D synthesis in the body is severely restricted. An additional supply in the form of dietary supplements is therefore recommended especially in the dark season.

Vitamin D not only supports the maintenance of normal immune function, but also the absorption and utilization of calcium and phosphorus in the intestines. Furthermore, it is involved in the maintenance of muscles and bones, as well as the teeth and supports a normal calcium level in the blood. A sufficient supply of the power substance vitamin D supports the entire organism on the way to more well-being.

Biogena Vitamin D 2000 DUO is a quality preparation, which with 50 µg (2000 I.E.) per capsule offers a high content of vitamin D3. To further improve vitamin D absorption, the capsules contain high-quality native linseed oil. The innovative NutriGellets® technology used here makes it possible to dispense with additives and preservatives and also optimises the bioavailability of the valuable ingredients.

Vitamin D 2000 DUO

- Vitamin D supports the function of the immune system
- Vitamin D contributes to maintaining normal muscle function, bone and calcium levels in the blood
- Vitamin D contributes to normal absorption and utilization of calcium and phosphorus
- With linseed oil for improved absorption
- With innovative NutriGellets® technology to improve bioavailability

Possible applications:

- To support the immune system
- For the preservation of bones, musculature and teeth
- For the normal absorption of calcium and phosphorus and the maintenance of a normal calcium level in the blood
- For an optimum supply of sun vitamin throughout the year
- With valuable plant substances for high bioavailability
