

Vitamin D3 15.000

High quality vitamin D3 for easy weekly supplementation

Vitamin D3, which has been proven for many years, is now available in a high dosage form for even easier application. One capsule contains 15.000 I.E. (international units) of vitamin D3 as a weekly intake. This corresponds to a daily intake of 2,143 I.E. (= 53.6 µg) and thus offers an uncomplicated possibility of regular intake of the vitamin.

Vitamin D not only supports the maintenance of normal immune function, but also the absorption and utilization of calcium and phosphorus in the body. Furthermore, it is involved in the maintenance of muscles and bones, as well as teeth and supports a normal calcium level in the blood. The so-called sun vitamin can only be absorbed in small amounts from food and is mainly formed by the sun's rays in the skin. The weak sunlight during the autumn and winter months reduces the body's own vitamin D production, which makes the use of a micronutrient preparation all the more sensible.

Biogena Vitamin D3 15.000 also contains the mineral magnesium. Magnesium is an important cofactor in vitamin D metabolism. The sensible formula with the combination of magnesium and high-dose vitamin D thus offers you an optimum opportunity to ensure your supply.

Vitamin D3 15.000

- Vitamin D supports the normal function of the immune system
- Vitamin D helps maintain normal muscle function, bones, teeth and calcium levels in the blood.
- Vitamin D contributes to normal absorption and utilization of calcium and phosphorus
- High dose with 15.000 I.E. per capsule for once a week consumption
- With magnesium

Possible applications:

- To support the immune system
- For the preservation of bones, musculature and teeth
- For the normal absorption of calcium and phosphorus and the maintenance of a normal calcium level in the blood
- For an optimum supply of sun vitamin throughout the year
- For easy weekly intake of high-dose vitamin D3
