

Wild Garlic BP 450

Wild garlic - not only a culinary highlight

If you wander through the shady, damp deciduous and mixed forests of Europe in spring, you will be accompanied in many places by a spicy hint of garlic. Wild garlic (*Allium ursinum*) is not only one of the oldest native wild herbs, our ancestors also recognised the inner values of the garlic plant very early on. According to historical stories, bears that feasted on the herbs after their winter hibernation regained their old bear powers. This is probably one of the reasons why the herb bears the name of the intelligent wild animal in many European languages.

Wild garlic not only smells and tastes like garlic, it also has a similarly fine mixture of ingredients as its cultivated relative. Among the plant-specific substances are sometimes sounding names such as alliin, methiin, allicin and adenosin. The latter is not only found in garlic plants, but also in our organism.

Biogena Wild Garlic BP 450 - with the finest European wild garlic powder

Wild Garlic BP 450 puts an end to the search for the coveted green leaves. Sourced from European wild collection, wild garlic has been processed into premium quality wild garlic powder (Bearlic®) and standardised for its adenosine content. Wild garlic supports the normal function of the heart and blood vessels as well as normal cholesterol metabolism. This makes Biogena Wild Garlic BP 450 a naturally clever strategy for all those people who want to support their heart, blood vessels and cholesterol metabolism in a herbal way - at any time of year.

Biogena Wild Garlic BP 450

- The spring plant from European wild collection - available at any time of the year
- Premium wild garlic leaf powder with plant-specific ingredients to support the heart and blood vessels
