

Zink Tropfen

Liquid zinc for young and old

With Biogena Zink Tropfen, the targeted supply of the immune classic zinc is child's play. The drops convince with their fruity taste of passion fruit and lime and the well-dosed, highly bioavailable organic zinc gluconate. The liquid form of consumption offers a practical alternative for people of all ages who do not want to or cannot swallow capsules. The integrated pipette makes the drops easy to dose - 5 mg of elemental zinc equals ½ pipette. Whether in a muesli or smoothie, diluted with water or fruit juice - the Biogena zinc drops can be integrated into everyday life in a versatile and uncomplicated way.

The multi-faceted immune nutrient

The multi-talent zinc is involved in many processes in the body and is a component of numerous enzyme systems. There is no typical storage organ for zinc, which is why it must be regularly supplied with food. Especially in the cold season, many people want to support their physical defences as best as possible. Zinc can make a special contribution here, because it contributes to a functional immune system and protects the cells from oxidative stress. Zinc is important for cell division and also plays a role in DNA and protein synthesis. There is no central storage organ for zinc. High levels are found in parts of the eyes, testicles and prostate, hair and skin, the islet cells of the pancreas, the liver and, above all, muscles and bones. Especially in the cold season, many people want to support their physical defences in the best possible way. Zinc can make a contribution here, because it contributes to a functional immune system and protects the cells from oxidative stress. It also contributes to many other important bodily functions such as fertility and the metabolism of nutrients, cell division and DNA synthesis, as well as the maintenance of eyes, hair and nails synthesis. This means that our cells are not only optimally protected, but also equipped for rapid regeneration.

Biogena Zink Tropfen

- Zinc supports the normal function of the immune system
- Zinc helps to protect cells from oxidative stress
- Zinc has a function in cell division, DNA and protein synthesis
- Zinc plays a role in normal vitamin A metabolism and in the maintenance of vision
